Dear Sirs,
XM Radio and any other broadcasting corporation should be able to broadcast weather and news, just like the local stations. I do not understand how their rights differ from any other local station's rights. There are many of us who travel and don't get local station programming on a regular basis. Satellite radio has resolved this issue for the traveler. It would be great to know the weather and traffic before I actually end up sitting in it. I fully support satellite radio!
